

Open source software (OSS) programs are becoming more vital for companies to maintain an edge against their competition. According to a recent report¹, companies with open source programs enjoy important benefits such as fostering an open source culture, improving technical recruiting, improving compliance, and more.

Codescoop is the world's first software intelligence platform built to quantify and visualize a company's strategic contribution to open source. Codescoop provides a 360 degree view of your open source programs to help benchmark your company's OSS programs, contributions, and community, and visualize how it's changing day-by-day.

Codescoop Open Source Program Metrics and Analysis

OSS Search & Comparison

Search and compare OSS components, libraries, and tools based on repo and community metadata and other correlated information. Receive news and alerts on your favored components.

Benchmark Your Program

Benchmark your open source programs to determine your progress or set goals. Visualize metrics month over month, versus industry peers and competitors, or by project.

Quantify OSS Programs

Support and promote relationship and reputation with developers. Analyze and quantify the value of your OSS programs for internal and external stakeholders.

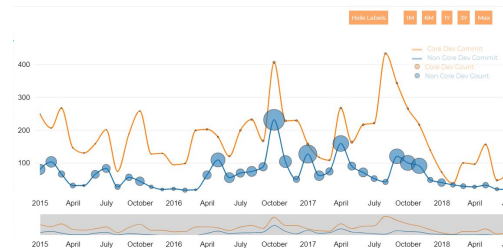

See Your OSS Program in High Definition

Get the big picture of your strategic OSS programs, improve project quality, and measure contributions. Codescoop takes a Big Data and Business Intelligence approach to clarify the complexity of OSS and innersource programs. We combine data from your repos, new commits, and other internal sources with third-party data such as OSS contribution sites, blogs, news, and more.

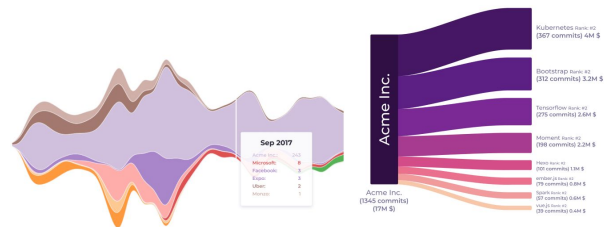

Visualize

Track open source projects and contributors, compare core vs non-core developers, visualize data to analyze issues, quality, contributors, history, and more.

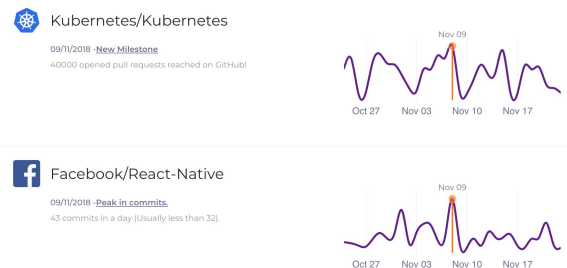

Discover

Compare and benchmark OSS commits, open and closed issues, pull requests, forks, and more by project, company, or contributor.

Accelerate

Search and compare OSS and innersource components based on license types, languages, category, and more. Subscribe to alerts – news or significant changes – for the components used in your stacks.

Available as SaaS or on-premise. RESTful API available. More information at www.codescoop.com or email us at hello@codescoop.com.
